Coronavirus Disease – COVID-19 21.08.2020

- The death toll from the coronavirus outbreak is over 797,990 worldwide, with the highest number of deaths in USA (177,477) and Brazil (112,423). There have been more than 22,914,406 global cases in 210 countries and territories.
- As part of the MicroCoVSens project, researchers are developing a new portable device designed to simplify testing for coronaviruses. The University of Applied Sciences and Arts of Italian Switzerland (SUPSI), the University of Italian Switzerland (USI), and the Swiss Federal Institute of Technology in Lausanne (EPFL) are all participating in this project. The new portable coronavirus testing device developed by the researchers is designed to deliver a result within the space of just ten minutes, as detailed by a press release issued by USI. This is set to replace lab-based testing processes that require a great deal of time and manpower. According to information in the press release, the device should also be able to be operated by people without any specialist professional training. The aim is to use this device at airports, train stations and other similar locations.
- Mass testing of Russia's first potential Covid-19 vaccine to get domestic regulatory approval will involve
 more than 40,000 people and will be overseen by a foreign research body when it starts next week,
 backers of the project said. These were the first details on the shape and size of the upcoming late-stage
 trial of the vaccine given by its developers, who are aiming to allay concerns among some scientists
 about the lack of data provided by Russia so far.
- The WHO is in discussions with Russia to obtain more information about its experimental Covid-19 vaccine named Sputnik V even as Russia plans to give it to some 40,000 people next week for further testing. Catherine Smallwood, a senior emergency official at WHO/Europe, said the agency had begun direct discussions with Russia and that WHO officials have been sharing the various steps and information required for the WHO to take assessments. "We're not going through a rushed job of trying to jump to conclusions here. We want to take our time to really understand where the vaccine is at and to get as full information as possible on the steps that have already been taken," Smallwood said. Hans Kluge, director of WHO/Europe, said the agency welcomed all advances in vaccine development but that every vaccine must submit to the same clinical trials.
- Sitting squeezed between a number of strangers on board an aircraft might feel like a risky position during these uncertain times. But according to some experts who point to the very few documented cases of in-flight transmission, the chances of catching Covid-19 while on board a flight are actually relatively slim. Fear of flying during the pandemic has drastically reduced global air traffic, which has also been restricted due to border closures. If new scientific claims are borne out, the perceived heightened risk of boarding an airplane could be unfounded. In one case, about 328 passengers and crew members were tested for coronavirus after it was learned that a March 31 flight from the US to Taiwan had been carrying 12 passengers who were symptomatic at the time. However, all the other passengers tested negative, as did the crew members. And while there have certainly been cases of infected passengers passing the virus on to an airplane's crew or fellow travelers in recent months, the transmission rates are low.

- France plans to make masks compulsory in almost all workplaces and Finland will ration common
 medicines in anticipation of a second wave this autumn as new coronavirus infections continue to rise
 around Europe. Amid evidence from several countries that the increase on the continent is being driven
 mainly by younger people, the WHO said 20- to 50-year-olds were also the main spreaders of the virus
 in the western Pacific region.
- Voluntary mass testing of citizens for coronavirus will begin in Hong Kong on September 1, Chief
 Executive Carrie Lam said on Friday. Tests will be free of charge. Any Hong Kong citizens with no
 symptoms -- except children under the age of six and people with bad throat or nasal conditions -- can
 join the testing program. The testing will last for seven days.
- The novel coronavirus epidemic is "out of control" in parts of Spain, according to the director of the country's Center for Health Emergencies. "Currently the epidemic is not out of control at a national level, but it is in some concrete places. It's true that the characteristics of the cases are different, it's true that hospitalizations and the data from the pressure on the [health] system are different, but we are having an important transmission," director added. Spain currently has the highest infection rate of any country in Europe according to the European Center for Disease Control (ECDC).
- Switzerland: The number of new positive cases has increased in recent weeks. On August 16, the 7-day average reached 208.3 new cases per day, which is a 43% increase from the previous week. In addition, Basel City has become the first German-speaking canton to require customers to wear face masks in shops to combat the spread of the coronavirus. To keep the risk of coronavirus spreading as low as possible, everyone will be required to wear a facemask as soon as they enter any ETH building. This measure already applies from 24 August.

Newly reported cases since 01.06 in Switzerland.

Funding opportunity for researchers
