## Coronavirus Disease – COVID-19 25.03.2020

- The death toll from the coronavirus outbreak is over 19,790 worldwide, with the vast majority in Italy (6,820) and China (3,281). There have been more than 446,000 global cases in 197 countries.
- China's Hubei Province, ground zero for the pandemic, plans to lift nearly all lockdown restrictions tomorrow.
- The World Health Organization has partnered with Facebook, Microsoft and several other tech companies for a hackathon to promote the development of software to take on challenges related to the coronavirus pandemic. Tech companies Twitter, WeChat, TikTok, Pinterest, Slack and Giphy are also participating.
- World Health Organization Director-General Tedros Adhanom Ghebreyesus warned untested drugs can
  provide false hope and cause a shortage of proven treatments needed for other diseases. In addition to
  malaria, both drugs are used to treat rheumatoid arthritis and lupus.
- Results from the first controlled trial on "hydroxychloroquine" for COVID-19 are out. But the study is really too small to conclude much of anything.
- Vaccine researchers say they are wasting time applying for grants rather than developing drugs to beat
  the coronavirus because of a huge shortfall in desperately needed funds. Scientists told that because of
  a lack of funding it was entirely possible that they could develop a vaccine that works, but not have the
  manufacturing capacity or understanding in place to then produce the millions of doses needed.
- Today, the United Nations system is launching a humanitarian campaign to fight the coronavirus in the world's most vulnerable countries. This virus knows no borders, and we are only as strong as the weakest health system.
- Switzerland has introduced temporary restrictions on the export of protective equipment to head off shortages among medical staff and others fighting the coronavirus outbreak.
- Deliveries of protective equipment to Switzerland are still blocked in France and Germany, despite a European Union directive exempting the export of protective equipment to EFTA states from needing an export permit.
- The Swiss government has extended entry restrictions to all Schengen States. This will increase the protection given to the population against the coronavirus, it says.
- Spain requests NATO assistance to tackle coronavirus pandemic
- Australia banned overseas travel and extended social restrictions, Prime Minister Scott Morrison announced today. "We will be living with this virus for at least six months" Morrison warned, stating further that, "The highest priority should be placed on social isolation measures."
- Two infants in San Diego have tested positive for coronavirus, Public Health Officer Dr. Wilma Wooten
  announced at a news conference Tuesday. This is the first time San Diego County has reported cases of
  infants less than one year of age, Wooten confirmed.
- New Zealand has recorded a 30% jump in coronavirus cases as the country heads into lockdown by the
  end of day Wednesday, according to Ashley Bloomfield, the country's Director of Health. There are 47
  new confirmed cases and three new probable cases, bringing to 205.

- Two scientists —sociologist Emma Spiro and crisis informatics researcher Kate Starbird—are monitoring news reports and scraping massive amounts of data from social media platforms, they are examining how misinformation is spreading during the pandemic, and how scientific expertise factors into public perceptions. "We're trying to think about questions of how data and statistics are being used and debated in these conversations online, and what is the impact of that on public understanding and the way that people make decisions and take actions," Spiro told this week.
- New York's infection "attack rate" is five times higher than the rest of the US.
